

Particulate Filters

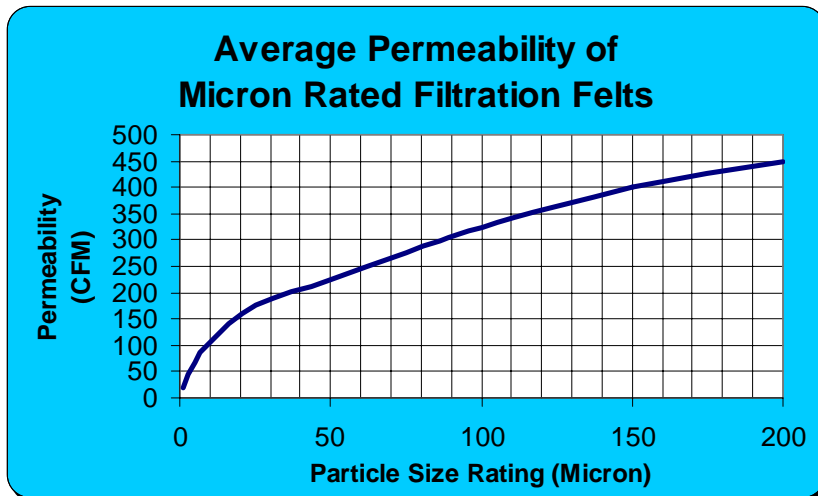

BMP designed filtration products are capable of filtering 1 to 500 micron size particles and can be used within gas and liquid filtration applications. Our cost effective non-woven textile & fabric products are custom designed each time for your specific needs. We work with you in order to meet your system's functional requirements, understanding that our filters enhance and extend the performance of your end product.

BMP filter properties:

- variable pore sizes
- chemical resistant
- temperature range up to 500 c
- rigid or flexible filter drape (hand) properties
- anti-static properties

Achieve your application requirements by specifying:

- Desired permeability
- Expected particulate size
- Expected thermal environment
- Expected chemical environment
