

Automatic Transmission Fluid Filtration

One of BMP's areas of expertise is in the design and production of critical media products used in automatic transmission fluid filtration.

We are continuously innovating and developing media that provides:

- Higher filtration efficiency
- Lower pressure drop
- Improved dirt holding capacity
- Extended life and increased performance

BMP media combined with chemical treatments such as phenolic resin, PET screens, and micro glass fibre medias, provide excellent and long lasting filter media products designed for the most demanding automatic transmission systems.

BMP works with our partner companies and external media supplier companies to develop the right product for each of our customer's applications.

Our suction and pressure filter media products provide our customers with a wide range of media filtering performance.

For more information about automotive products please email: info@bmpworldwide.com

Light & Heavy Duty Engine Air Filtration

Our experience in a range of applications provides our customer's unique technology transfer opportunities that benefit the automotive industry.

We are able to develop specialised media for a single project or propose an existing media to meet our customer's specifications. We take into account environmental conditions the product's intended use, and draw-on our in-group experts to provide the right solutions.

BMP is experienced in meeting technical media specifications including fibre size, shape, type, weight, thickness, and mechanical strength.

All of these combine to result in high performance filtration products. BMP filter media products are ready and available for technical automotive air filter design applications.

Fibre chemistries:

- Polyester
- Glass
- Aramid
- P-84
- Nylon
- Cellulose
- PTFE
- Acrylic
- PPS
