

Filtration

Engineered non-woven textiles for Filtration Applications

BMP is a leading worldwide provider of filtration products and is a technology-driven company committed to satisfying customer needs. BMP manufactures a broad spectrum of liquid and air filtration products to meet the evolving needs of our diverse customers.

BMP's products with their innovative construction and reliable performance, add value to every customer application.

BMP media offers versatility and proven results through a wide variety of engineered textiles. Our product development and engineering teams can custom design the product utilising state-of-art converting systems such as: pleating, die-cutting, precision slitting, Ultrasonic welding, sewing and many other advanced processing technologies.

Depending upon the required performance characteristics, BMP can create a media with single or multiple layers with unique blends of different fibre deniers and types within each layer.

Our technological leadership, combined with strong customer relationships and a global presence, will keep us at the
