

Project Engineer

The Role:

Reporting to the Technical Manager, the role will involve a variety of project engineering activities from quotation stage and project costing, through to expediting required equipment/tooling and validating manufacturing processes prior to implementation of manufacture and providing support to both production and quality.

- Central to the task will be a requirement to ensure that all work activity is planned, scheduled and completed in accordance with customer expectations.
- Working with Sales at the initiation of a project to provide costings and technical support in order to provide robust, deliverable quotations.
- Development of functional specifications for the purchase of equipment, raising Purchase Orders, maintaining project schedules whilst tracking and reacting effectively to changes
- Development of effective partnerships with equipment & tooling suppliers to ensure product integrity and the achievement of scheduled delivery objectives; actively working to reduce and manage any corrective backlogs that arise.
- Supporting production with technical expertise and developing manufacturing methods whilst documenting clear procedures to guide production operatives.
- Tracking modifications in order that revised specifications and processes are understood by all stakeholders and comply with customer requirements.

The Person:

- Educated to degree level in an appropriate discipline, you will have gained solid project engineering experience with a broad depth of knowledge. Previous experience of working with Polymers – ideally Polyurethane would be of especial interest.
- You will possess a good Engineering background, underpinning your ability to interpret drawings with ease. Your experience need not be sector-specific; of more importance would be your understanding of manufacturing processes and project costing, your ability to interface effectively with suppliers and your ability to make a positive contribution across a broad customer and product base.
- We would expect strong software literacy, and in particular, a good grasp of the MS Office suite of products including Word, Excel and Power Point as well as MS Projects.
- Innovative and creative and with excellent communication skills, you must have a keen attention to detail and be comfortable working in varied range of products from a number of industries, each having their own unique requirements and standards to be maintained.

Applicants should send their covering letter and CV to Richard Brook at info@bmpeurope.com
